

01

## Document

Please supply artwork at 100% size where possible or to scale if the size exceeds the artboard limits. Indicate this in the file name - @100%, @50% etc

02

## Bleed

Please include bleed outside your final print size. Ideally 50mm - 100mm for large wall coverings. For wrap mounts allow for the thickness of the substrate + 5mm. When cutting to shape allow minimum image/artwork bleed of 2mm.

03

## File

Supply native files, preferably **InDesign** or **Illustrator** & include all fonts & links used. Additionally provide a visual in PDF format for us to proof. If elements are required 'Cut To Shape', a vector cut file must be provided in a separate non-printable layer.

04

## Resolution

Please ensure that images are 100dpi at final size. Low resolution images will result in poor quality reproduction. Photoshop images should be approximately 60mb per sq metre.

05

## Colour

Any colours to be matched should be indicated in the file information. Displayways can match to Pantone, RAL and Paint colours where required but specific instructions are required.

06

## Supply

Send files via file transfer services such as 'WeTransfer' or 'Dropbox'. Alternatively for large projects we can set up a dedicated FTP site on demand.
